PREFACE

The authors feel great pleasure in presenting the first edition of **ICSE Physics** for **Class-X** which has been written in accordance with the latest ICSE syllabus. The subject matter of the book has been designed by keeping in mind the new trend of the question paper. Emphasis has been laid on simplicity of language, conceptual clarity, proper sequence of the topics, neat and properly labelled colourful diagrams. We have tried to communicate the scientific facts in a very simple language and to provide understanding of the terms, concepts, facts, definitions and laws of Physics. At many places text is highlighted to present the important points. Useful and interesting information along with simple diagrams have been added to each chapter.

For generating the interest of the students, sufficient number of solved examples, short answer type questions, multiple choice type questions, assertion and reason type questions, fill in the blanks type questions along with a number of exercises and numericals have been given at the end of each subpart of a chapter.

It has been a great pleasure to work with '**Shri Balaji Publications, Muzaffarnagar**' and our sincere thanks to the entire team of the publication.

We welcome suggestions and comments from students and fellow teachers for the improvement of the book.

Authors

Syllabus

There will be one paper of **two hours** duration carrying 80 marks and Internal Assessment of practical work carrying 20 marks.

Note: Unless otherwise specified, only SI Units are to be used while teaching and learning, as well as for answering questions.

1. Force, Work, Power and Energy

- (i) Turning forces concept; moment of a force; forces in equilibrium; centre of gravity; [discussions using simple examples and simple numerical problems].

Elementary introduction of translational and rotational motions; moment (turning effect) of a force, also called torque and its cgs and SI units; common examples - door, steering wheel, bicycle pedal, etc.; clockwise and anti-clockwise moments; conditions for a body to be in equilibrium (translational and rotational); principle of moment and its verification using a metre rule suspended by two spring balances with slotted weights hanging from it; simple numerical problems; centre of gravity (qualitative only) with examples of some regular bodies and irregular lamina.

- (ii) Uniform circular motion.

As an example of constant speed, though acceleration (force) is present. Differences between centrifugal and centripetal force.

- (iii) Work, energy, power and their relation with force.

Definition of work. $W = FS \cos \theta$; special cases of $\theta = 0^\circ, 90^\circ$. $W = mgh$. Definition of energy, energy as work done. Various units of work and energy and their relation with SI units. [erg, calorie, kWh and eV]. Definition of Power, $P = W/t$; SI and cgs units; other units, kilowatt (kW), megawatt (MW) and gigawatt (GW); and horsepower (1 hp = 746W) [Simple numerical problems on work, power and energy].

- (iv) Different types of energy (e.g., chemical energy, mechanical energy, heat energy, electrical energy, nuclear energy, sound energy, light energy).

Mechanical energy: potential energy $U = mgh$ (derivation included) gravitational PE, examples; kinetic energy $K = \frac{1}{2}mv^2$ (derivation included); forms of kinetic energy: translational, rotational and vibrational - only simple examples. [Numerical problems on K and U only in case of translational motion]; qualitative discussions of electrical, chemical, heat, nuclear, light and sound energy, conversion from one form to another; common examples.

- (v) Machines as force multipliers; load, effort, mechanical advantage, velocity ratio and efficiency; simple treatment of levers, pulley systems showing the utility of each type of machine.

Functions and uses of simple machines: Terms- effort E , load L , mechanical advantage $MA = L/E$, velocity ratio $VR = V_E/V_L = d_E/d_L$, input (W_i), output (W_o), efficiency (η), relation between η and MA , VR (derivation included); for all practical machines $\eta < 1$; $MA < VR$.

Lever: principle. First, second and third class of levers; examples: MA and VR in each case. Examples of each of these classes of levers as also found in the human body.

Pulley system: single fixed, single movable, block and tackle; MA , VR and η in each case.

- (vi) Principle of Conservation of energy.

Statement of the principle of conservation of energy; theoretical verification that $U + K = \text{constant}$ for a freely falling body. Application of this law to simple pendulum (qualitative only); [simple numerical problems].

2. Light

- (i) Refraction of light through a glass block and a triangular prism - qualitative treatment of simple applications such as real and apparent depth of objects in water and apparent bending of sticks in water. Applications of refraction of light.

Partial reflection and refraction due to change in medium. Laws of refraction; the effect on speed (V), wavelength (λ) and frequency (f) due to refraction of light; conditions for a light ray to pass undeviated. Values of speed of light (c) in vacuum, air, water and glass; refractive index $\mu = c/V$, $V = f\lambda$. Values of μ for common substances such as water, glass and diamond; experimental verification; refraction through glass block; lateral displacement; multiple images in thick glass plate/mirror; refraction through a glass prism, simple applications: real and apparent depth of objects in water; apparent bending of a stick under water. (Simple numerical problems and approximate ray diagrams required).

- (ii) Total internal reflection: Critical angle; examples in triangular glass prisms; comparison with reflection from a plane mirror (qualitative only). Applications of total internal reflection.

Transmission of light from a denser medium (glass/water) to a rarer medium (air) at different angles of incidence; critical angle (C) $\mu = 1/\sin C$. Essential conditions for total internal reflection. Total internal reflection in a triangular glass prism; ray diagram, different cases - angles of prism ($60^\circ, 60^\circ, 60^\circ$), ($60^\circ, 30^\circ, 90^\circ$), ($45^\circ, 45^\circ, 90^\circ$); use of right angle prism to obtain $\delta = 90^\circ$ and 180° (ray diagram); comparison of total internal reflection from a prism and reflection from a plane mirror.

- (iii) Lenses (converging and diverging) including characteristics of the images formed (using ray diagrams only); magnifying glass; location of images using ray diagrams and thereby determining magnification.

Types of lenses (converging and diverging), convex and concave, action of a lens as a set of prisms; technical terms; centre of curvature, radii of curvature, principal axis, foci, focal plane and focal length; detailed study of refraction of light in spherical lenses through ray diagrams; formation of images - principal rays or construction rays; location of images from ray diagram for various positions of a small linear object on the principal axis; characteristics of images. Sign convention and direct numerical problems using the lens formula are included (derivation of formula not required).

Scale drawing or graphical representation of ray diagrams not required.

Power of a lens (concave and convex) – [simple direct numerical problems]: magnifying glass or simple microscope: location of image and magnification from ray diagram only [formula and numerical problems **not** included]. Applications of lenses.

- (iv) Using a triangular prism to produce a visible spectrum from white light; electromagnetic spectrum. Scattering of light.

Deviation produced by a triangular prism; dependence on colour (wavelength) of light; dispersion and spectrum; electromagnetic spectrum: broad classification (names only arranged in order of increasing wavelength); properties common to all electromagnetic radiations; properties and uses of infrared and ultraviolet radiation. Simple application of scattering of light e.g., blue colour of the sky.

3. Sound

- (i) Reflection of sound waves; echoes: their use; simple numerical problems on echoes.

Production of echoes, condition for formation of echoes; simple numerical problems; use of echoes by bats, dolphins, fishermen, medical field. SONAR.

- (ii) Natural vibrations, Damped vibrations, Forced vibrations and Resonance - a special case of forced vibrations.

Meaning and simple applications of natural, damped, forced vibrations and resonance.

- (iii) Loudness, pitch and quality of sound:

Characteristics of sound: loudness and intensity; subjective and objective nature of these properties; sound level in decibel(dB) (as unit only); noise pollution; interdependence of: pitch and frequency; quality and waveforms (with examples).

4. Electricity and Magnetism

- (i) Ohm's Law; concepts of emf, potential difference, resistance; resistances in series and parallel, internal resistance.

Concepts of pd (V), current (I), resistance (R) and charge (Q). Ohm's law: statement, $V = IR$; SI units; experimental verification; graph of V vs I and resistance from slope; ohmic and non-ohmic resistors, factors affecting resistance (including specific resistance) and internal resistance; super conductors, electromotive force (emf); combination of resistances in series and parallel and derivation of expressions for equivalent resistance. Simple numerical problems using the above relations. [Simple network of resistors].

(ii) Electrical power and energy.

Electrical energy; examples of heater, motor, lamp, loudspeaker, etc. Electrical power; measurement of electrical energy, $W = QV = VIt$ from the definition of pd. Combining with ohm's law $W = VIt = I^2Rt = (V^2/R)t$ and electrical power $P = (W/t) = VI = I^2R = v^2/R$. Units: SI and commercial; Power rating of common appliances, household consumption of electric energy; calculation of total energy consumed by electrical appliances; $W = Pt$ (kilowatt $\times$ hour = kWh), [simple numerical problems].

(iii) Household circuits – main circuit; switches; fuses; earthing; safety precautions; three-pin plugs; colour coding of wires.

House wiring (ring system), power distribution; main circuit (3 wires-live, neutral, earth) with fuse / MCB, main switch and its advantages - circuit diagram; two-way switch, staircase wiring, need for earthing, fuse, 3-pin plug and socket; conventional location of live, neutral and earth points in 3 pin plugs and sockets. Safety precautions, colour coding of wires.

(iv) Magnetic effect of a current (principles only, laws not required); electromagnetic induction (elementary); transformer.

Oersted's experiment on the magnetic effect of electric current; magnetic field (B) and field lines due to current in a straight wire (qualitative only), right hand thumb rule – magnetic field due to a current in a loop; Electromagnets: their uses; comparisons with a permanent magnet; Fleming's Left Hand Rule, the DC electric motor- simple sketch of main parts (coil, magnet, split ring commutators and brushes); brief description and type of energy transfer (working not required): Simple introduction to electromagnetic induction; frequency of AC in house hold supplies, Fleming's Right Hand Rule, AC Generator - Simple sketch of main parts, brief description and type of energy transfer (working not required). Advantage of AC over DC. Transformer- its types, characteristics of primary and secondary coils in each type (simple labelled diagram and its uses).

5. Heat

(i) Calorimetry: meaning, specific heat capacity; principle of method of mixtures; Numerical Problems on specific heat capacity using heat loss and gain and the method of mixtures.

Heat and its units (calorie, joule), temperature and its units ($^{\circ}C$, K); thermal (heat) capacity $C' = Q/\Delta T...$ (SI unit of C'): Specific heat Capacity $C = Q/m\Delta T$ (SI unit of C) Mutual relation between Heat Capacity and Specific Heat Capacity, values of C for some common substances (ice, water and copper). Principle of method of mixtures including mathematical statement. Natural phenomenon involving specific heat. Consequences of high specific heat of water. [Simple numerical problems].

(ii) Latent heat; loss and gain of heat involving change of state for fusion only.

Change of phase (state); heating curve for water; latent heat; specific latent heat of fusion (SI unit). Simple numerical problems. Common physical phenomena involving latent heat of fusion.

6. Modern Physics

(i) Radioactivity and changes in the nucleus; background radiation and safety precautions.

Brief introduction (qualitative only) of the nucleus, nuclear structure, atomic number (Z), mass number (A). Radioactivity as spontaneous disintegration. α , β and γ - their nature and properties; changes within the nucleus. One example each of α and β decay with equations showing changes in Z and A . Uses of radioactivity - radio isotopes. Harmful effects. Safety precautions. Background radiation.

Radiation: X-rays; radioactive fallout from nuclear plants and other sources.

Nuclear Energy: working on safe disposal of waste. Safety measures to be strictly reinforced.

(ii) Nuclear fission and fusion; basic introduction and equations.

A NOTE ON SI UNITS

SI units (System International d'Unites) were adopted internationally in 1968.

Fundamental units

The system has seven fundamental (or basic) units, one for each of the fundamental quantities.

Fundamental quantity	Unit	
	Name	Symbol
Mass	kilogram	Kg
Length	metre	m
Time	second	s
Electric current	ampere	A
Temperature	kelvin	K
Luminous intensity	candela	cd
Amount of substance	mole	mol

Derived units

These are obtained from the fundamental units by multiplication or division; no numerical factors are involved. Some derived units with complex names are:

Derived quantity	Unit	
	Name	Symbol
Volume	cubic metre	m^3
Density	kilogram per cubic metre	kg m^{-3}
Velocity	metre per second	m s^{-1}
Acceleration	metre per second square	m s^{-2}
Momentum	kilogram metre per second	kg m s^{-1}

Some derived units are given special names due to their complexity when expressed in terms of the fundamental units, as below:

Derived quantity	Unit	
	Name	Symbol
Force	newton	N
Pressure	pascal	Pa
Energy, Work	joule	J
Power	watt	W
Frequency	hertz	Hz
Electric charge	coulomb	C
Electric resistance	ohm	Ω
Electromotive force	volt	V

When the unit is named after a person, the symbol has a capital letter.

Standard prefixes

Decimal multiples and submultiples are attached to units when appropriate, as below:

Multiple	Prefix	Symbol
10^9	giga	G
10^6	mega	M
10^3	kilo	k
10^{-1}	deci	d
10^{-2}	centi	c
10^{-3}	milli	m
10^{-6}	micro	μ
10^{-9}	nano	n
10^{-12}	pico	p
10^{-15}	femto	f

CONTENTS

1. Force

1–32

1.1	Concept of Force	1
1.2	Translational and Rotational Motions	2
1.3	Moment (Turning Effect) of a Force or Torque	3
1.4	Couple	5
1.5	Equilibrium of a Rigid Object	6
1.6	Principle of Moments	8
1.7	Centre of Gravity	16
1.8	Circular Motion	22
1.9	Centripetal Force	23
1.10	Centrifugal Force	23
	● Questions from ICSE Board Examinations	28

2. Work, Energy and Power

33–84

2.1	Work	33
2.2	Measurement of Work Done by a Force	34
2.3	Nature of Work Done in Various Situations	35
2.4	Conditions for the Work Done by a Force to be Zero	37
2.5	Graphical Interpretation of Work	37
2.6	Work Done Under Condition	38
2.7	Units of Work	38
2.8	Power-Rate of Doing Work	39
2.9	Difference between Work and Power	39
2.10	Energy (as Work Done)	39
2.11	Units of Energy	40
2.12	Difference between Energy and Power	40
2.13	Mechanical Energy and Its Different Forms	50
2.14	Kinetic Energy	50
2.15	Work-Energy Theorem	51
2.16	Various Forms of Kinetic Energy	51
2.17	Potential Energy	52
2.18	Different Forms of Energy	54
2.19	Conversion of Energy from One Form into the Other Form	56

2.20	Example of Transformation of Energy	57
2.21	Law of Conservation of Energy	68
2.22	Conservation of Mechanical Energy	68
2.23	Application of Law of Conservation of Energy in Case of a Simple Pendulum	69
●	Questions from ICSE Board Examinations	75

3. Machines

85–122

3.1	Introduction to Machines	85
3.2	Functions of a Machine	85
3.3	Types of Machine	86
3.4	Technical Terms Related to Machines	87
3.5	Principle of a Machine	88
3.6	Cause of Energy Loss in a Machine	88
3.7	Relation between Efficiency (η), Mechanical Advantage (M.A.) and Velocity Ratio (V.R.)	88
3.8	Levers	89
3.9	Principle of a Lever (M.A. of a Lever)	89
3.10	Kinds of Levers	90
3.11	Examples of Levers Found in Human Body	92
3.12	Pulley	102
3.13	Single Fixed Pulley	102
3.14	Single Movable Pulley	103
3.15	Combination of Pulleys	104
●	Questions from ICSE Board Examinations	116

4. Refraction of Light at Plane Surfaces

123–179

4.1	Refraction of Light	124
4.2	Laws of Refraction	125
4.3	Principle of Reversibility of Light	128
4.4	Refraction of Light through a Rectangular Glass Slab	129
4.5	Experimental Verification of Laws of Refraction and Determination of Refractive Index of Glass	129
4.6	Formation of Multiple Images in a Thick Glass Plate/Mirror	131
4.7	Prism	139
4.8	Refraction of Light through Prism	139
4.9	Real and Apparent Depth-Normal Displacement	147
4.10	Apparent Bending of a Rod which is Immersed Partially and Obliquely in Water	148
4.11	Critical Angle	152
4.12	Total Internal Reflection	153
4.13	Total Internal Reflection in Prisms	154
4.14	Some Effects Based on Total Internal Reflection	156
●	Questions from ICSE Board Examinations	165

5. Refraction of Light through Lenses

180–217

5.1	Lens	180
5.2	Converging and Diverging Action of Lenses	181
5.3	Some Definitions Related With Lenses	182
5.4	Factors on Which Focal Length of Lens Depends	184
5.5	Formation of Images by Convex and Concave Lenses	187
5.6	Method of Drawing the Ray Diagram	188
5.7	Image Formation by a Convex Lens	189
5.8	Image Formation by a Concave Lens	191
5.9	Difference Between the Images Formed By a Convex and a Concave Lens	192
5.10	Sign Convention for Measurement of Distances	197
5.11	Lens Formula	198
5.12	Linear Magnification Produced by a Lens	199
5.13	Power of a Lens	200
5.14	Simple Microscope or Magnifying Glass	205
5.15	Experimental Determination of Focal Length of a Given Convex Lens	205
5.16	Applications of Lenses	207
5.17	How to Differentiate Between a Convex and a Concave Lens	207
	• Questions from ICSE Board Examinations	209

6. Spectrum

218–236

6.1	Deviation Produced by a Triangular Prism	218
6.2	Dependence of Angle of Deviation (δ) on the Wavelength (or Colour) of Incident Light	219
6.3	Composition of White Light	219
6.4	Dispersion of White Light Through Prism and Spectrum-Newton's Experiment	219
6.5	Electromagnetic Spectrum	224
6.6	Sources, Properties and Uses of Various Radiations Present in the Electromagnetic Spectrum	226
6.7	Comparison between Ultraviolet, Visible and Infrared Radiations	228
6.8	Scattering of Light	231
6.9	Factors on which Intensity of Scattered Light Depends	231
6.10	Some Phenomena based upon Scattering of Light	231
	• Questions from ICSE Board Examinations	234

7. Sound

237–285

7.1	Some Basic Facts About Sound Waves	237
7.2	Reflection of Sound Waves	239
7.3	Experimental Verification of Laws of Reflection of Sound	239
7.4	ECHO	240
7.5	Reverberation	241

7.6	Determination of Speed of Sound in Air by Echo Method	241
7.7	Applications of Echo	241
7.8	Natural Vibrations	249
7.9	Damped Vibrations	250
7.10	Forced Vibrations	251
7.11	Resonance	252
7.12	Characteristics of Sound	260
7.13	Music and Noise	265
	● Questions from ICSE Board Examinations	272

8. Current Electricity

286–349

8.1	Concept of Charge	286
8.2	Concept of Electric Current	287
8.3	Electric Potential and Potential Difference (P.D.)	288
8.4	Experimental Verification of Ohm's Law	293
8.5	Ohmic and Non-Ohmic Conductors/Resistors	294
8.6	Electric Cell	304
8.7	Terminal Potential Difference (or Terminal Voltage)	305
8.8	Internal Resistance of a Cell	306
8.9	Combination of Resistances	307
8.10	Electrical Energy	323
8.11	Measurement of Electrical Energy	323
8.12	Electrical Power	324
8.13	Commercial Unit of Electrical Energy	325
8.14	Rating of an Electrical Appliance	325
8.15	House Hold Consumption of Electrical Energy	326
8.16	Heating Effect of Electric Current	326
	● Questions from ICSE Board Examinations	337

9. Household Circuits

350–372

9.1	Transmission of Power from Power Generating Station to the Consumer	350
9.2	Power Distribution from City Sub-Station upto the House of Consumer	351
9.3	Domestic Wiring - Ring System	352
9.4	Overloading of an Electric Circuit	353
9.5	Short Circuiting	353
9.6	Fuse	353
9.7	Switches	356
9.8	Dual Control Switches (Staircase Wiring Circuit)	357

9.9 Earthing (Grounding)	357
9.10 Three Pin Plug	358
9.11 Socket	359
9.12 Colour Coding of Wires in a Cable	359
9.13 High Tension Wire	359
9.14 Safety Precautions Required While Using the Electricity	359
• Questions from ICSE Board Examinations	369

10. Electro-Magnetism

373–415

10.1 Oersted's Experiment : Production of Magnetic Field by Electric Current or Moving Charges	373
10.2 Magnetic Field and Magnetic Field Lines due to Current Flowing in a Straight Wire	374
10.3 Direction of Magnetic Field-Right Hand Thumb Rule	375
10.4 Magnetic Field due to Current Carrying Circular Coil/Loop	376
10.5 Magnetic Field due to a Solenoid	377
10.6 Electromagnet	378
10.7 Permanent Magnet	379
10.8 Comparison of Permanent Magnet and Electromagnet	379
10.9 Advantages of Electromagnet over a Permanent Magnet	380
10.10 Uses of Electromagnets	380
10.11 Force on a Current Carrying Conductor Placed inside a Magnetic Field	387
10.12 DC Electric Motor	388
10.13 Introduction of Electromagnetic Induction	394
10.14 Faraday's Laws of Electromagnetic Induction	396
10.15 AC Generator	397
10.16 Frequency of Alternating Current	398
10.17 Difference between AC generator and DC motor	400
10.18 Transformer	400
• Questions from ICSE Board Examinations	410

11. Calorimetry

416–459

11.1 Concept of Heat and Temperature	416
11.2 Unit of Temperature	417
11.3 Units of Heat	417
11.4 Difference between Heat and Temperature	418
11.5 Factors on Which the Amount of Heat Required to Raise the Temperature of a Body Depends	418
11.6 Thermal Capacity or Heat Capacity	419

11.7 Specific Heat Capacity	419
11.8 Differences between Heat Capacity and Specific Heat Capacity	420
11.9 Specific Heat Capacity of Some Common Substances	420
11.10 Calorimeter	421
11.11 Principle of Calorimetry (or Principle of Heat) or Principle of Mixtures	421
11.12 Consequences of High Specific Heat Capacity of Water	422
11.13 Some Examples of High and Low Heat Capacity	423
11.14 Change of Phase (State)	431
11.15 Melting (or Fusion) and Melting Point	432
11.16 Heating Curve of Ice During the Process of Melting	432
11.17 Change in Volume When a Substance Melts	433
11.18 Factors Affecting Melting Point of Solids	433
11.19 Boiling or Vaporisation and Boiling Point	433
11.20 Condensation (or Liquefaction) and Condensation Point	434
11.21 Heating Curve for Water	434
11.22 Change in Volume When a Liquid is Boiled	435
11.23 Factors Affecting Boiling Point of a Liquid	435
11.24 Latent Heat and Specific Latent Heat	435
11.25 Specific Latent Heat of Fusion of Ice	436
11.26 Specific Latent Heat of Freezing of Water	436
11.27 Phenomenon Related to High Specific Latent Heat of Fusion of Ice	437
• Questions from ICSE Board Examinations	447

12. Radioactivity

460–492

12.1 Structure of the Atom	460
12.2 Structure of Nucleus of Atom	461
12.3 Representation of Atomic Structure of an Element	461
12.4 Isotopes	462
12.5 Isobars	463
12.6 Isotones	464
12.7 Radioactivity	464
12.8 Rutherford's Experiment : Emission of Alpha (α), Beta (β) and Gamma (γ) rays	464
12.9 Properties of α -Particles	465
12.10 Properties of β -Particles	466
12.11 Properties of γ -Rays	467
12.12 Changes within the Nucleus due to Emission of α -Particle, β -Particle and γ -Rays	467

12.13 Uses of Radioactivity—Radioisotopes	470
12.14 Sources of Harmful Radiations	471
12.15 Harmful Effects Caused by Radiation	471
12.16 Safety Precautions While Using Nuclear Energy	472
12.17 Background Radiations	472
12.18 Nuclear Energy—An Introduction	480
12.19 Einstein’s Mass-Energy Equivalence Relation	480
12.20 Nuclear Fission	481
12.21 Difference between Radioactive Decay and Nuclear Fission	482
12.22 Nuclear Fusion	483
12.23 Difference/Comparison between Nuclear Fission and Nuclear Fusion	483
● Questions from ICSE Board Examinations	487
