About this book

This handbook provides a comprehensive overview of the application of nanotechnology in agricultural sectors to boost sustainable agriculture with the use of these modern age nanomaterials and nanodevices that are empowering to attain maximum output from limited resources. The application of nanotechnology includes, enhancing plant growth and protection through the use of nanoparticles, the management of plant diseases and pest management through nano herbicides nanofungicides, nano/smart fertilizers for controlled and target release of nutrients, food processing and preservation with polymers nanocomposites. Further, in agriculture sectors nanosensors seem to be a promising tool for detection of fertilizers, herbicides, pesticides, and insecticides as well as pathogens, moisture, soil pH, soil contaminants, contaminants, and other parameters to improve crop health and sustainability. Moreover, nanosensors have also a significant role in precision agriculture activity, satellite farming or site-specific crop plants management in terms of detecting, calculating, and responding to inter and intra-field variability of crop plants. This handbook summarizes the recent findings, in-depth discussions and a wide range applications associated with smart nano research and technology for overall agricultural sectors and represents an indispensable reference for nano-based professionals, academic researchers, and upper level of students.

Table of contents (30 entries)

Biochar and Nanotechnology for Sustainable Crop Growth and Soil Conservation

Shahram Torabian, Salar Farhangi-Abriz

Carbon Nanomaterials: Fullerenes, Graphene, and Nanotubes in Agriculture

Iram Gul, Syeda Irsa Mazhar Kazmi, Muhammad Arshad

Harnessing Magnetic Nanomaterials for Sustainable Plant Growth: Mechanisms, Benefits, and Challenges

Shweta Sharma, Dilbag Singh, Varsha Malik, Kiran Kiran, Deepak Beniwal, Divya Kapoor et al.

Nano-Encapsulated Pesticides for Targeted Pest Control

Ravinder Kumar, Baljeet Singh Saharan, Surekha, Jyoti Rani, Joginder Singh Duhan

Nano-enhanced Organic Farming: A Sustainable Approach

Lakshika Arya, Nishtha Chawla, Hina Alim, Nimisha Patel

Nano-Pesticides: Sustainable Alternatives to Traditional Pest Control

Hassan Nawaz, Zia Ud Din, Hamza Irshad, Muhammad Shahid

Nanoclays and Nanocomposites for Agricultural Use

Mohamed A. Amin, Mahmoud A. Eldiehy, Abdelatti I. Nowwar

Nanofertilizers: Revolutionizing Nutrient Delivery in Crops

Misba Khan, Nisha Ali, Mariyam Rafi, Archana Vimal, Reena Vishvakarma

Nanomaterials for Enhanced Crop Protection and Growth

Weria Weisany

Nanomaterials for Increasing Photosynthesis Efficiency

Hamzeh Amiri, Parvaneh Hemmati Hassan Gavyar, Yusuf Farrokhzad

Nanosensors and Their Role in Fertilizers, Herbicides, Pesticides, and Insecticides Detection

Rishi Raj, Deepika Chauhan, Ranjana Verma, Jay Singh

Nanosensors in Agricultural Applications: An Overview

Reena Vishvakarma, Mohammad Areeb Siddiqui, Nida Ansari, Pooja Kumari, Fiza Batool, Zoha Parvez et al.

Nanotechnology and Sustainable Agriculture: Transforming Global Farming

Shivani Garg

Nanotechnology for Climate Change Mitigation in Agriculture

Shifa Shaffique, Muhammad Aaqil Khan, Anis Ali Shah, Muhammad Saleem Khan, Javier Trujilo Rogmas, Sang-Mo Kang et al.

Nanotechnology for Sustainable Agriculture and Global Food Systems

Avijit Biswas, Subhadwip Ghorai, Sahely Kanthal, Avishek Chatterjee, Madhusri Pramanick, Pabitra Kumar Ghosh et al.

Nanotechnology for Sustainable Water Management in Precision Agriculture

Weria Weisany

Nanotechnology in Agriculture: Principles and Applications

Sandra Fabiola Velasco Ramírez

Nanotechnology in Biocontrol Agents for Sustainable Pest Management

Subhadwip Ghorai, Ankur Mukhopadhyay, Sk Md. Asif, Rajdeep Mohanta, Sourav Roy, Soham Hazra et al.

Nanotechnology in Irrigation Systems: Enhancing Water Use Efficiency

Vikas Sharma, Vedika Dhingra

Nanotechnology in Plant-Based Agricultural Innovations

Pooja V. Nagime, Vaishali S. Chandak

Azamal Husen

About the editor

Professor Azamal Husen research and teaching experience of 25 years encompasses nanobiotechnology, plant physiology, environmental botany, medicinal plants and plant propagation. He has contributed to R&D projects of the World Bank, the National Agricultural Technology Project, the Indian Council of Agriculture Research, the Indian Council of Forest Research Education, the Japan Bank for International Cooperation, and so on. Husen has published extensively (>300) and served on the Editorial Board, worked as Special Issue Guest Editor and reviewer of reputed journals published by Elsevier, Frontiers Media, Taylor & Francis, Springer Nature, RSC, Oxford University Press, Sciendo, the Royal Society, CSIRO, PLOS, MDPI, John Wiley & Sons, and UPM Journals. He is on the advisory board of Cambridge Scholars Publishing, UK. He is a fellow of the Plantae group of the American Society of Plant Biologists, and a member of the International Society of Root Research, Asian Council of Science Editors, and International Natural Product Sciences. He has given numerous talks and presentations in many conferences and workshops. Prof. Husen has also given various orientation courses for academic staff, prepared different modules, developed BSc, MSc and PhD curriculum. Moreover, he has received a recognition award from University of Gondar, Ethiopia for a decade of service in teaching, research and community services.

PDF accessibility summary

This PDF has been created in accordance with the PDF/UA-1 standard to enhance accessibility, including screen reader support, described non-text content (images, graphs), bookmarks for easy navigation, keyboard-friendly links and forms and searchable, selectable text. We recognize the importance of accessibility, and we welcome queries about accessibility for any of our products. If you have a question or an access need, please get in touch with us at accessibilitysupport@springernature.com. Please note that a more accessible version of this eBook is available as ePub.

EPUB accessibility summary

This ebook is designed with accessibility in mind, aiming to meet the ePub Accessibility 1.0 AA and WCAG 2.2 Level AA standards. It features a navigable table of contents, structured headings, and alternative text for images, ensuring smooth, intuitive navigation and comprehension. The text is reflowable and resizable, with sufficient contrast. We recognize the importance of accessibility, and we welcome queries about

accessibility for any of our products. If you have a question or an access need, please get in touch with us at accessibilitysupport@springernature.com.

Abstract

The ongoing global environmental crisis has adversely affected agricultural productivity and, in the process, threatened food security. To boost agricultural production and enhance crop yield, the use of pesticides and fertilizers has led to the accumulation of toxins and heavy metals, further exacerbating the issue. Conventional methods of monitoring and quantifying the contaminants and toxins, like gas chromatography, mass spectrometry, and high-performance liquid chromatography, have proved to be effective but are at a disadvantage owing to limitations such as the need for skilled personnel, costly and sophisticated instruments, and complexity in use. With the advent of nanotechnology, a suitable alternative to these conventional methods has emerged as nanobiosensors or nanosensors, which are simple, cost-effective, and rapid in real-time analysis of soil temperature, moisture, pH, detection of contaminants, pesticides, and microorganisms in soil. Transitioning from laboratory study to commercial utility of nanosensors is tedious, but its successful application in agriculture commercially will ensure enhanced agricultural productivity while promoting sustainability.
