Index

Note: Page numbers followed by “*f*” and “*t*” refer to figures and tables, respectively.

A

- AdaBoost classifier, 184
 - Adaptive histogram clip (AHC), 198
 - Agricultural digitalization, 108–109
 - Agricultural e-commerce, 92–93, 97–98, 107–108
 - Agricultural economics
 - impact of gross domestic product, 75–78
 - government schemes, 77–78
 - share of agriculture in GDP, 76–77
 - meteorology, 80–84
 - agrometeorology as interdisciplinary science, 84
 - agrometeorology’s relationship with agricultural sciences, 83
 - crops and animals using agrometeorology, 83–84
 - meteorology and agrometeorology, difference between, 83
 - scope of agrometeorology, 82–83
 - prediction of crop price, 72–74
 - traditional agriculture versus machine learning agriculture, economical changes in, 78–80
 - Agricultural GDP, farm share of, 5*f*
 - Agricultural meteorology, 81
 - Agricultural monitoring, 60
 - Agricultural output, 76
 - Agricultural sector, 173
 - Agricultural system modeling, 8
 - Agricultural technology, 105–106
 - Agricultural value chain components, 106*f*
 - Agricultural yield predicting methods, 8
 - Agriculture market, share of AI in, 79*f*
 - Agrometeorology, 82
 - animals, 84
 - crops, 83
 - as interdisciplinary science, 84
 - scope of, 82–83
 - AI-based system, 72–73
 - AlexNet, 192, 195, 200–201, 266–267
 - architecture of deep learning model of, 202*f*
 - confusion matrix for, 207*f*
 - training loss of, 209*f*
 - Area of interest (AOI), 248
 - Artificial intelligence (AI), 3–4, 48–49, 51–52, 71, 91–92, 159
 - in agriculture, 71*f*
 - plant diseases detection using. *See* Plant diseases detection, using artificial intelligence
 - for smart farming, 81*f*
 - Artificial neural network (ANN), 6, 51, 135–136, 289
 - Autoencoder-based disease detection
 - AE model, framework of, 246*f*
 - convolutional neural network, 243
 - experimental valuation, 253–257
 - description of dataset, 253
 - evaluation metric, 255
 - implementation details, 253–254
 - performance of classification by concise convolutional neural network, 256
 - performance of remedy recommendation stacked autoencoder (SAE), 256–257
 - performance of segmentation by cascading autoencoder, 255
 - multilayer perceptron (MLP), 241–242
 - proposed method, 244–253
 - disease classification phase, 248–249
 - disease detection phase, 245–248
 - recommendation phase, 249–253
 - sentiment analysis, 243–244
 - stacked denoising autoencoder, 242–243
 - Average precisions, 276*t*
- ## B
- Back propagation (BP), 12–13
 - Back propagation neural networks (BPNN), 174–177
 - Bacterial blotch, 191–192, 195, 196*t*
 - Bayesian system (BN), 52
 - Beehive wall, 214
 - Behavioral market segmentation, 103
 - Big data, 107
 - Big data technology, 91–92
 - Biomass production models, 48
 - Blob analysis, 248
 - BMP-180 sensor, 120, 121*f*
 - BP neural network, 185
 - Bubble, 191–192, 195, 196*t*
 - Business-to-business (B2B), 94
 - Business-to-consumer (B2C), 94
- ## C
- Captive optical fibers, 221–222

- Castor oil, 214
 - Centroid method, 169
 - Classification methods, 287–289
 - artificial neural networks, 289
 - decision tree, 289
 - K*-nearest neighbors (*K*-NN), 288–289
 - Naïve Bayes, 288
 - random forest, 289
 - support vector machines (SVMs), 288
 - Cobweb, 191–192, 195, 196*t*
 - Color image processing, 285
 - Communication technology, 40–42, 42*f*
 - Compression, 285–286
 - Contrast-limited adaptive histogram equalization (CLAHE), 198, 200
 - Conventional machine learning, 239–240
 - Convolutional layer, 205, 289
 - Convolutional neural network (CNN), 4, 9, 50–51, 136, 174–177, 185, 192, 243, 244*f*, 266, 291
 - architecture of, 292*f*
 - Apple flower detection by, 298*f*
 - CNN object detection model, 10–12
 - Covid-19 lockdowns, 263
 - COVID-19 pandemic, 91–92, 95–97, 104
 - Crop disease (CD) diagnosis, 162
 - fuzzy framework for, 162–163, 163*f*
 - fuzzy rules for, 167*t*
 - Crop monitoring analysis, 60*t*
 - Crop prediction, 39–40
 - input parameters of, 22*f*
 - Crop price, prediction of, 72–74
 - Crop simulation, 47–48
 - Crop yield, 297–298
 - Crop yield prediction, 13–15, 14*f*, 21–23
 - methodology, 14–15
 - output for, 22*f*
 - techniques, 19*t*
 - using ANN, 35*f*
 - using KNN, 34*f*
 - using linear regression, 36*f*
 - using random forest, 36*f*
- D**
- Darknet 53, 272
 - Data augmentation, 197*f*, 271–272
 - Data cleaning process, 73, 122
 - Data collection, 73, 269–271
 - Data collection devices, 36–38
 - Data exploration, 73
 - Data preprocessing, 138–141
 - Data storage, 39
 - Decision tree (DT), 6, 52–53, 135–136, 185, 289
 - Deep learning (DL), 239–240, 266–268
 - classification, 266
 - object detection, 266–268
 - techniques, 6, 48–49
 - Deep learning-based approach for mushroom disease classification
 - dataset description, 195
 - methods, 195–204
 - deep learning algorithm, 200–203
 - GoogleNet, 203–204
 - image augmentation, 195–196
 - image enhancement technique, 198–200
 - noise removal from image, 197–198
 - result analysis and discussion, 204–209
 - Deep learning-based prediction
 - future research directions, 151–152
 - model evaluation, 144–150
 - classification performance analysis, 144–148
 - experimental setup, 144
 - vegetation index analysis, 148–150
 - rubber land-use mapping and age estimation via remote sensing imagery, 133–135
 - solution design and implementation, 138–144
 - data preprocessing, 138–141
 - model design, 138
 - supervised learning process, 141–144
 - study challenges, 151
 - study contributions, 150
 - study materials, 137–138
 - dataset, 137–138
 - details of area of study, 137
 - supervised classification methods, 135–136
 - Deep learning model, 272–274
 - Deep neural network (DNN), 50–51, 115, 115*f*, 195–196
 - Defuzzification, 169
 - Demographic market segmentation, 101–103
 - DensNet121, 266
 - Densnet161, 266
 - DHT11 sensor, 118, 119*f*
 - Difference vegetation index (DVI), 134–135
 - Digital agricultural market
 - COVID-19 pandemic, impacts of, 95–97
 - digital agricultural value chain and stakeholders, 105–106
 - impact on poverty reduction, food security rates, and food losses and waste reduction, 107–108
 - market segmentation of, 101–104
 - negative impacts of uncertainty, 97–98
 - opportunities and risks of investment in, 98–100
 - Digital agricultural market (DAM), 91–92, 98
 - Digital agriculture, challenges to, 101*f*
 - Digital agriculture revolution, 108

- Digital marketing on small agricultural stakeholders
 - agricultural digitalization, 108–109
 - COVID-19 pandemic, impacts of, 95–97
 - digital agricultural value chain and stakeholders, 105–106
 - electronic business, 93–95
 - market segmentation, 101–104
 - mitigating negative impacts of uncertainty, 97–98
 - mobile banking system, 104–105
 - opportunities and risks of investment in, 98–100
 - poverty reduction, food security rates, and food losses and waste reduction, 107–108
 - Disease classification phase, 248–249
 - Disease detection, 295–296
 - Disease detection module, 174–177
 - Disease detection phase, 245–248
 - cascading autoencoder (CAE), 245–248
 - threshold module, 248
 - infection region detector, 248
 - Disease recognition module, 174–177
- E**
- E-business, 93–94
 - components of, 93*f*
 - E-commerce, 93–94
 - risks of, 100*f*
 - EfficientNetB0, 192–194
 - Electric fence, 214
 - Electronic business, 93–95
 - E-Mandi, 15–18, 23, 24*f*
 - functionalities, 18
 - methodology, 16–18
 - Empirical regression models, 48
 - Environmental vegetation index (EVI), 134–135
 - Expert system, 160–161
 - architecture of, 161*f*
 - Extraction procedure, 12
 - Extrinsic fiber-optic sensors, 220–221
- F**
- F1-score, 206
 - FCN-8 decoder
 - training and validation accuracy of, 146*f*
 - FCN-8 decoder-based segmentation model, 142*f*
 - FCN-8 model, 138, 141–143
 - Feature extraction, 183–184, 264–265, 286
 - extracting color features, 183
 - extracting shape features, 183–184
 - extracting texture features, 184
 - Feedforward neural networks (FFTN), 174–177
 - Fencing, 213–214
 - Fencing agricultural land, 233
 - Fiberglass, 218
 - Fiber optic links, 217
 - Fiber optics, 216
 - Fiber optic sensors, 220–221
 - 15 Point RMS value, 224–226, 226*f*
 - 5G connections, in sub-Saharan Africa, 99*f*
 - Flower and seed detection, 298
 - Food security, 108
 - Fruit/food grading, 297
 - Fully convolutional networks (FCNs), 133
 - Fuzzification, 163–164
 - Fuzzy clustering, 290–291
 - Fuzzy inference engine, 164–168
 - Fuzzy logic, 162
 - Fuzzy system architecture, 162–164, 162*f*
 - fuzzification, 163–164
 - fuzzy framework, 163
 - knowledge base, 162–163
- G**
- Gabor transform, 239–240
 - Gait-based analysis, 226–230
 - Gaussian noise, 198
 - Gaussian process, 291
 - Geographical Information System (GIS), 133, 135
 - Geographic market segmentation, 101–103
 - Google Colab service, 205
 - GoogleNet, 192, 195, 203–204, 266–267
 - architecture of, 205*f*
 - confusion matrix for, 208*f*
 - training loss of, 209*f*
 - Graduated record filaments, 218
 - Gross domestic product (GDP), 75
 - share of agriculture in, 76–77, 78*t*
 - Guardrail, 214
- H**
- Histogram equalization, 181–182
 - HOG (histogram of oriented gradient), 239–240
 - Humidity (HY), 163–164
 - triangular membership function plot for, 165*f*
- I**
- ICCYF (Integrated Canadian Crop Yield Forecaster), 59–60
 - Image acquisition, 10–11, 180–181, 285
 - Image annotation, 271
 - Image classification, 6, 266, 286
 - Image enhancement, 285
 - Image noise, 181–182, 192
 - Image preprocessing, 11–12, 181–182
 - Image recognition, 184–185, 284
 - performance measures for, 185–186

- Image restoration, 285
 - Image segmentation, 12, 182–183
 - edge based, 182
 - feature-based clustering, 183
 - region based, 182
 - threshold based, 183
 - InceptionV3, 192–194
 - Index fibers, 218
 - Indian economy, 75
 - Indices and feature extraction algorithms, 134
 - Indoor farming, 79–80, 80*f*
 - Information and communications technology (ICT), 93–94
 - Intelligent fence, 215
 - Intensity-based fiber-optic sensor, 221
 - Internet of Things (IoT), 29, 113–114, 159
 - Intersection over union (IoU), 274
 - Intrinsic type fiber optic sensors, 220
 - Irrigation, 293
- J**
- Jupyter Notebook, 121
- K**
- k*-Means, 290
 - K*-means clustering, 174–177
 - K*-nearest neighbors (KNN), 6, 174–177, 239–240, 288–289
 - classifier, 185
 - regression, 33
 - Knowledge-based systems, 160
- L**
- LASSO, 50–51
 - Leaf analysis, 293–294
 - Leaf area index (LAI), 134–135
 - Leaf diseases detection, 295*f*
 - Least squares, 52
 - Light intensity (LI), 163–164
 - triangular membership function plot for, 166*f*
 - Linear regression (LR), 135–136, 289
 - Long-term short memory, 292
 - Livestock monitoring, 48–49
 - Long short-term memory (LSTM), 50–51
 - Long Term Irrigation Fund (LTIF), 78
- M**
- Machine learning (ML), 4, 29–30, 48, 52–53, 71, 73, 114, 159, 243–244, 265–266
 - algorithms, 43*f*, 286
 - comparative analysis of smart agriculture, 31*t*
 - Machine learning methods, application of, 299*t*
 - Machine learning-based agriculture
 - comparative study, 18
 - comparison between different crop yield prediction techniques, 18
 - comparison between different pest detection techniques, 18
 - deep learning, in agriculture, 8–9
 - literature review, 6–8
 - proposed method, 10–18
 - crop yield prediction, 13–15
 - E-Mandi, 15–18
 - pest detection, 10–13
 - results and discussions, 18–23
 - crop yield prediction, 21–23
 - E-Mandi, 23
 - pest detection, 18–20
 - transfer learning for pest detection, 9
 - Machine learning-based remote monitoring and predictive analytics system
 - benefits of work, 53–54
 - comparative analysis, 60–61
 - reported work, 56–60
 - research challenges, 54–55
 - role of artificial intelligence and machine learning for crop monitoring, 56
 - techniques used, 51–53
 - artificial intelligence, 51–52
 - machine learning, 52–53
 - Machine learning model, 41*f*
 - for prediction, 50*f*
 - Machine learning techniques, for agricultural image recognition
 - applications of image processing, in agricultural task, 292–300
 - crop yield, 297–298
 - disease detection, 295–296
 - flower and seed detection, 298
 - fruit/food grading, 297
 - irrigation, 293
 - leaf analysis, 293–294
 - monitoring plant growing, 296
 - pest control, 295
 - plant classification, 298–300
 - soil assessment, 293
 - vegetation measurement, 296
 - weed detection, 294–295
 - steps for image analysis, 284–286
 - strategies, 286–292
 - deep learning models, 291–292
 - traditional machine learning methods, 286–291
 - Mahogany (*Swietenia macrophylla*), 152
 - Market segmentation, 101–104, 102*f*
 - MARS-Crop Yield Forecasting System, 59–60
 - Maximally stable extremal regions (MSER), 6
 - Mean absolute error, 34*f*

Mean average precision (mAP), 275, 276*t*
 Mean squared error method, 124–125
 Meteorology, 80–84
 and agrometeorology, 83, 83*t*
 agrometeorology as interdisciplinary science, 84
 agrometeorology's relationship with agricultural sciences, 83
 crops and animals using agrometeorology, 83–84
 scope of agrometeorology, 82–83
 ML models, comparison of, 37*f*
 Mobile banking system, 104–105
 MobileNetV2, 192–194
 Mobile phone penetration rate, 107*f*
 Mobile phone technology, 108
 Mold, 191–192, 195, 196*t*
 Monitoring agricultural essentials
 proposed predictive model for agriculture, 35–42
 communication technology, 40–42
 crop prediction, 39–40
 data collection devices, 36–38
 data storage, 39
 real-time monitoring, 40
 results and discussion, 42–43
 supervised machine learning algorithms for agriculture, 33–35
 artificial neural network (ANN), 33
 linear regression, 34
 random forest, 35
 unsupervised machine learning algorithms for agriculture, 30–33
 Morphological operation, 286
 M-Pesa, 104–105
 Multilayer perceptron (MLP), 241–242, 242*f*
 Multimode fiber, 218–219
 Multiple criteria market segmentation, 103
 Multiple linear regression (MLR), 289–290
 Mushroom cultivation, 191–192
 Mushroom diseases, visual signs of, 196*f*

N

National Bee and Honey Mission (NBHM), 77–78
 Naïve Bayes (NB), 288
 Normalized difference vegetation index (NDVI), 134–135, 148–150

O

Object detection model versus classification model, 273–274
 Optical fiber cable, 216–218
 as sensor, 219–220
 Optical fibers, types of, 218–219

P

Parameter configuration, 274*t*
 Particle swarm optimization (PSO) technique, 174–177
 Peppers, 214
 Pest control, 295
 Pest detection, 10–13, 11*f*, 18–20
 in grape plant, 21*f*
 performance evaluation, 12–13
 in tomato plant, 20*f*
 Phase-based fiber optic sensor, 222
 Plant classification, 298–300
 Plant disease classification, 268*t*
 Plant disease recognition, process of, 181*f*
 Plant diseases detection, using artificial intelligence
 discussion and future work, 186–187
 feature extraction, 183–184
 image acquisition, 180–181
 image preprocessing, 181–182
 image recognition, 184–185
 image segmentation, 182–183
 edge based, 182
 feature-based clustering, 183
 region based, 182
 threshold based, 183
 literature survey, 174–179
 performance measures for image recognition techniques, 185–186
 recognizing plant diseases, 180
 techniques for recognizing, 178*t*
 Plant growing, monitoring, 296
 PlantDoc dataset, 270, 271*f*, 271*t*
 PlantVillage dataset, 6–7, 7*f*, 253, 270*f*, 270*t*
 Plastic optical filaments, 218
 Plastic wall, 214
 PM KISAN, 77–78
 Polarization-based fiber-optic sensor, 221–222
 Polymethylmethacrylate, 218
 Pradhan Mantri Fasal Bima Yojana (PMFBY), 77–78
 Pradhan Mantri Krishi Sinchai Yojana (PMKSY), 77–78
 Preprocessing, 264
 Price forecasting model, 73*f*
 Price prediction algorithm, 74*f*
 Principal component analysis (PCA), 174–177, 239–240
 Probability density functions (PDF), 197–198
 Processing unit, 215
 Process-oriented crop models, 8
 Proposed deep learning architectures
 performance evaluation of, 147*t*
 Psychographic market segmentation, 103

R

Rain sensor, 118–119
 prototype of, 120*f*
 Random forest (RF), 135–136, 185, 239–240, 289
 Random forest algorithm, 116*f*
 Random forest program, 115–116
 Raspberry PI (R-Pi), 29
 Raspberry Pi 3, 117, 118*f*
 Real-time data and system architecture, 40*f*
 Real-time monitoring system, 41*f*
 crop prediction, 41*f*
 Recommendation phase, 249–253
 stacked autoencoder, 251–253
 Region-based fully convolutional network (R-FCN), 267
 Regions with convolutional neural networks (R-CNN), 267
 Regression activation map, 56–57
 Regression equation, 48
 Regression methods, 289–290
 linear regression (LR), 289
 multiple linear regression (MLR), 289–290
 support vector regression (SVR), 290
 Regression model, 122–124
 Reinforcement learning, 291
 Remote sensing (RS), 8, 47–48, 132–134
 models, 48
 Residual modules, 202
 Residual neural networks (ResNet), 151–152
 ResNet-101, 267
 ResNet15, 192, 195, 201–203, 207*f*
 architecture of, 204*f*
 training loss of, 209*f*
 Resnet50, 192–194
 ResNetXt-101, 267
 Restricted Boltzmann machine, 291–292
 Rice, 56–57
 RicePPINet, 57–58
 RS data-driven learning models, 150
 Rubber production, variation in, 132*f*

S

Scale-invariant feature transform (SIFT), 6, 239–240
 Segmentation, 286
 Sensor data, collection of, 39*f*
 Sentiment analysis, 243–244
 Sentiment lexicon, 244
 Sentinel-2, 139*f*
 Signal analysis, 223–230
 Signal capturing unit, 215
 Signal classification, 223

Single-mode fiber, 219
 Single-shot detector (SSD) MobileNet, 12–13
 Single value decomposition (SVD), 174–177
 Smart agriculture, 159
 fuzzy framework for, 161–169
 Smart agriculture, modeling techniques in expert system, 160–161
 fuzzy framework for smart agriculture, 161–169
 defuzzification, 169
 fuzzy inference engine, 164–168
 fuzzy system architecture, 162–164
 Smart farming systems (SFM), 91–92
 Smart fence to protect farmland from stray animals, 215
 agricultural fences, 213–214
 algorithm for classification, 230–231
 classification of fiber-optic sensors on basis of operating principles, 221–222
 intensity-based fiber-optic sensor, 221
 phase-based fiber optic sensor, 222
 polarization-based fiber-optic sensor, 221–222
 fiber-optic sensor systems, types of, 220–221
 extrinsic fiber-optic sensors, 220–221
 intrinsic type fiber optic sensors, 220
 natural repellents, 214–215
 optical fiber cable as sensor, 219–220
 fiber optic sensors, 220
 processing unit, 215
 results, 231–233
 signal analysis, 223–230
 gait-based analysis, 226–230
 signal capturing unit, 215
 transmitter, 215
 virtual fence setup using optical fiber sensor, 215–219
 optical fiber cable, 216–218
 types of optical fibers, 218–219
 Smartphones (SP), 92–93
 Smoke, 214
 Software Raspbian (Raspberry pi), 120
 Soil assessment, 293
 Soil moisture, sensor for, 118, 119*f*
 Soybean, 58–59
 Spatial gray-level dependence matrices (SGDM), 174–177
 Speeded-up robust features (SURF), 6
 SSD, 267
 Stacked autoencoder (SAE), 251–253
 Stacked denoising autoencoder, 242–243
 Stress-degree-day models, 48
 Supervised learning algorithms, 287–290, 288*f*
 classification methods, 287–289

- regression methods, 289–290
- Supervised learning process, 141–144
 - U-net model, 143–144
 - VGG-16 and FCN-8 model, 141–143
- Supervised machine learning algorithms, for
 - agriculture, 33–35
 - artificial neural network (ANN), 33
 - linear regression, 34
 - random forest, 35
- Support vector machine (SVM), 6, 135–136, 174–177, 184–185, 239–240, 288
- Support vector regression (SVR), 50–51, 290
- Synthetic agents, 214

T

- Taobao village model, 108–109
- Teak (*Tectona grandis*), 152
- Temperature (TP), 163–164
 - triangular membership function plot for, 165f
- TensorFlow model, 10
- TextBlob, 244
- ThingSpeak, 120–121
 - humidity, 124f
 - soil moisture, 123f
 - temperature, 123f
- Threshold boundary
 - for elephant, 232f
 - for human, 231f
 - for tiger, 232f
- Threshold setting, for noise removal, 223f
- Traditional machine learning methods, 286–291
 - deep learning models, 291–292
 - convolutional neural networks, 291
 - long-term short memory, 292
 - restricted Boltzmann machine, 291–292
 - reinforcement learning, 291
 - supervised learning algorithms, 287–290
 - classification methods, 287–289
 - ensemble methods, 290
 - regression methods, 289–290
 - unsupervised learning algorithm, 290–291
 - fuzzy clustering, 290–291
 - k-means, 290
 - Gaussian, 291
- Training loss, 275f
- Transfer learning, 9
 - for pest detection, 9f
- Transmitter, 215
- Triangular membership function plot
 - for crop disease (CD), 167f
 - for humidity (HY), 165f
 - for light intensity (LI), 166f
 - for temperature (TP), 165f
 - for wind direction (WD), 166f

U

- U-net architecture, 143f
- U-net-based segmentation model
 - training and validation accuracy of, 146f
 - training and validation loss of, 145f
- U-net model, 143–144
- Unsupervised learning algorithm, 290–291
 - k-Means, 290
 - fuzzy clustering, 290–291
 - Gaussian, 291
- Unsupervised machine learning algorithms, for
 - agriculture, 30–33
- UrbanAgro
 - implementation, 269–274
 - data augmentation, 271–272
 - data collection, 269–271
 - deep learning model, 272–274
 - image annotation, 271
 - methodology, 269
 - literature review, 264–268
 - deep learning, 266–268
 - feature extraction, 264–265
 - machine learning, 265–266
 - preprocessing, 264
 - results and discussion, 274–279

V

- Validation loss, 276f
- Vegetation indices (VIs), 132, 134–135
- Vegetation measurement, 296
- VGG16, 192–194, 266–267
- VGG-16 encoder
 - training and validation accuracy of, 146f
- VGG-16 encoder-based segmentation model, 142f
- VGG-16 model, 138, 141–143
- VGG19, 192–194
- Virtual fence setup
 - optical fiber sensor, using, 215–219

W

- Weather forecast support, intelligent farming
 - system through
 - methodology, 125
 - results, 125–128
 - system-related architecture, 116–121
 - Jupyter Notebook, 121
 - predicting temperature, 122–125
 - Raspberry Pi 3, 117
 - sensor BMP-180 type, 120
 - sensor for sensing rainfall, 118–119
 - sensor for soil moisture, 118
 - sensor module based on DHT11, 118
 - software Raspbian (Raspberry pi), 120

- Weather forecast support, intelligent farming system through (*Continued*)
 - ThingSpeak, 120–121
 - weather prediction, 122–125
 - technology stack used, 114
 - Internet of Things, 114
 - used algorithms, 115–116
 - deep neural networks, 115
 - random forest program, 115–116
 - Weather prediction, 122–125
 - Web-based user interface, 40
 - Weed detection, 294–295
 - Wheat, 56–57
 - Wind direction (WD), 163–164
 - triangular membership function plot for, 166*f*
 - WordNet, 244
- Y**
- YOLOv3 design, 272–273, 273*f*
- Z**
- ZFNet, 267

----------------------------	------

Section 1 Fundamentals of smart agriculture

CHAPTER 1 Machine learning-based agriculture 3

*Rijwan Khan, Mohammad Ayoub Khan,
Mohammad Aslam Ansari, Niharika Dhingra and
Neha Bhati*

Introduction.....	3
Literature review.....	6
Deep learning in agriculture.....	8
Transfer learning for pest detection	9
Proposed method	10
Pest detection.....	10
Crop yield prediction.....	13
E-Mandi	15
Comparative study.....	18
Comparison between different pest detection techniques	18
Comparison between different crop yield prediction techniques	18
Results and discussions	18
Pest detection.....	18
Crop yield prediction.....	21
E-Mandi	23
Conclusion	23
References.....	25

CHAPTER 2 Monitoring agricultural essentials..... 29

*Jhanvi P. Sarvaiya, Aditya P. Chaudhari and
Jai Prakash Verma*

Introduction.....	29
Unsupervised machine learning algorithms for agriculture	30
Supervised machine learning algorithms for agriculture.....	33
Artificial neural network	33
Linear regression	34
Random forest.....	35
Proposed predictive model for agriculture.....	35
Data collection devices.....	36
Data storage	39

Crop prediction	39
Real-time monitoring.....	40
Communication technology.....	40
Results and discussion	42
Summary	43
References.....	44

CHAPTER 3 Machine learning-based remote monitoring and predictive analytics system for monitoring and livestock monitoring 47

Nikita Goel, Yogesh Kumar, Sumit Kaur, Moolchand Sharma and Purna Sharma

Introduction.....	47
Motivation.....	49
Background study	50
Techniques used	51
Benefits of the work	53
Research challenges.....	54
Role of artificial intelligence and machine learning for crop monitoring	56
Reported work	56
Comparative analysis.....	60
Conclusion	62
References.....	63

Section 2 Market, technology and products

CHAPTER 4 Agricultural economics 71

Avinash Kumar Sharma, Rijwan Khan, Abhyudaya Mittal, Aditi Tiwari and Aashna Kapoor

Introduction.....	71
Prediction of crop price.....	72
Impact of gross domestic product	75
Share of agriculture in gross domestic product.....	76
Government schemes.....	77
Economical changes in traditional agriculture versus machine learning agriculture.....	78
Meteorology.....	80
Scope of agrometeorology.....	82
Agrometeorology’s relationship with agricultural sciences ..	83
Difference between meteorology and agrometeorology.....	83

	Crops and animals using agrometeorology.....	83
	Agrometeorology as an interdisciplinary science.....	84
	Conclusion.....	84
	References.....	85
CHAPTER 5	Current and prospective impacts of digital marketing on the small agricultural stakeholders in the developing countries.....	91
	<i>Abdelrahman Ali and Chunping Xia</i>	
	Introduction.....	91
	Definition of and types of electronic business.....	93
	Digital agricultural market before, during, and what is expected after the COVID-19 pandemic in developing countries.....	95
	Digital agricultural market to mitigate the negative impacts of uncertainty.....	97
	Opportunities and risks of investment in the digital agricultural market industry.....	98
	Market segmentation of the digital agricultural market in developing countries.....	101
	A mobile banking system.....	104
	Digital agricultural value chain and its stakeholders.....	105
	Impacts of digital agriculture on poverty reduction, food security rates, and food losses and waste reduction in developing countries.....	107
	Agricultural digitalization to achieve the sustainable development goals 2030.....	108
	Conclusion.....	109
	References.....	109
CHAPTER 6	Intelligent farming system through weather forecast support and crop production.....	113
	<i>Rakesh Mohan Pujahari, Satya Prakash Yadav and Rijwan Khan</i>	
	Introduction.....	113
	Technology stack used.....	114
	Internet of Things.....	114
	Used algorithms.....	115
	Deep neural networks.....	115
	Random forest program.....	115
	System-related architecture.....	116
	Raspberry Pi 3.....	117

Sensor module based on DHT 11	118
Sensor for soil moisture.....	118
Sensor for sensing rainfall.....	118
Sensor BMP-180 type.....	120
Software Raspbian (Raspberry pi)	120
ThingSpeak	120
Jupyter Notebook.....	121
Weather prediction	122
Predicting temperature.....	122
Methodology used	125
Results.....	125
Conclusions.....	128
References.....	128

CHAPTER 7 Deep learning-based prediction for stand age and land utilization of rubber plantation 131

<i>Indra Mahakalanda, Piyumal Demotte, Indika Perera, Dulani Meedeniya, Wasana Wijesuriya and Lakshman Rodrigo</i>	
Introduction.....	131
Background and related work	133
Rubber land-use mapping and age estimation via remote sensing imagery.....	133
Supervised classification methods.....	135
Study materials	137
Details of the area of study	137
Dataset	137
Solution design and implementation.....	138
Model design	138
Data preprocessing	138
Supervised learning process	141
Model evaluation	144
Experimental setup	144
Classification performance analysis.....	144
Vegetation index analysis.....	148
Discussion	150
Study contributions.....	150
Study challenges	151
Future research directions	151
Conclusion	152

Acknowledgment	152
References.....	153

Section 3 Tools and techniques

CHAPTER 8 Modeling techniques used in smart agriculture 159

N. Divya, S. Deepthi, G. Suresh Kumar and S. Manoharan

Introduction.....	159
Expert system	160
Fuzzy framework for smart agriculture	161
Fuzzy system architecture	162
Fuzzy inference engine.....	164
Defuzzification.....	169
Conclusion	169
References.....	169

CHAPTER 9 Plant diseases detection using artificial intelligence 173

Ravi Anand, Ritesh K. Mishra and Rijwan Khan

Introduction.....	173
Literature survey.....	174
Recognizing plant diseases.....	180
Image acquisition.....	180
Image preprocessing	181
Image segmentation.....	182
Region based.....	182
Edge based.....	182
Threshold based.....	183
Feature-based clustering.....	183
Feature extraction	183
Image recognition.....	184
Performance measures for image recognition techniques	185
Discussion and future work.....	186
Conclusion	187
References.....	188

CHAPTER 10 A deep learning-based approach for mushroom diseases classification 191

*Nusrat Zahan, Md. Zahid Hasan,
Mohammad Shorif Uddin, Shakhawat Hossain and
Sk. Fahmida Islam*

Introduction.....	191
-------------------	-----

Related works	192
Dataset description	195
Methods.....	195
Image augmentation	195
Noise removal from image.....	197
Image enhancement technique	198
Deep learning algorithm.....	200
GoogleNet.....	203
Result analysis and discussion	204
Conclusion	209
References.....	210

CHAPTER 11 Smart fence to protect farmland from stray animals	213
<i>Roshan Jahan, Ahkeela M. Khanum and Manish Madhav Tripathi</i>	
Introduction.....	213
Agricultural fences	213
Natural repellents.....	214
Smart fence to protect farmland.....	215
Virtual fence setup using optical fiber sensor	215
Optical fiber cable	216
Types of optical fibers.....	218
Optical fiber cable as sensor	219
Fiber optic sensors.....	220
Types of fiber-optic sensor systems.....	220
Intrinsic type fiber optic sensors	220
Extrinsic type fiber-optic sensors.....	220
Classification of fiber-optic sensors on the basis of operating principles	221
Intensity-based fiber-optic sensor	221
Polarization-based fiber-optic sensor	221
Phase-based fiber optic sensor	222
Signal analysis	223
Gait-based analysis to differentiate walking, running, and tapping	226
Algorithm for classification.....	230
Results.....	231
Conclusion	233
References.....	234

CHAPTER 12 Enhancing crop productivity through autoencoder-based disease detection and context-aware remedy recommendation system 239

S. Abinaya and M.K. Kavitha Devi

Introduction.....	239
Preliminaries	241
Multilayer perceptron	241
Stacked denoising autoencoder	242
Convolutional neural network	243
Sentiment analysis	243
Proposed method	244
Disease detection phase.....	245
Disease classification phase	248
Recommendation phase.....	249
Experimental valuation.....	253
Description of the dataset.....	253
Implementation details	253
Evaluation metric.....	255
Performance of segmentation by cascading autoencoder.....	255
Performance of classification by concise convolutional neural network	256
Performance of remedy recommendation stacked autoencoder (SAE)	256
Conclusion	257
References.....	258

CHAPTER 13 UrbanAgro: Utilizing advanced deep learning to support Sri Lankan urban farmers to detect and control common diseases in tomato plants 263

Dilsha Hettiarachchi, Vishmanthi Fernando, Hiruni Kegalle and Thilina Halloluwa

Introduction.....	263
Literature review.....	264
Preprocessing	264
Feature extraction	264
Machine learning	265
Deep learning.....	266
Implementation	269
Methodology	269
Data collection.....	269

Image annotation	271
Data augmentation	271
Deep learning model	272
Model Training	274
Results and discussion	274
Comparison of our results with previous works	279
Conclusion	280
Limitations	280
Future directions	280
Acknowledgments	281
References.....	281
CHAPTER 14 Machine learning techniques for agricultural image recognition	283
<i>Mohammad Reza Keyvanpour and Mehrnoush Barani Shirzad</i>	
Introduction.....	283
Steps for image analysis.....	284
Machine learning strategies in agricultural image recognition	286
Traditional machine learning methods.....	286
Deep learning models.....	291
Applications of image processing in agriculture tasks.....	292
Soil assessment	293
Irrigation	293
Leaf analysis	293
Weed detection	294
Pest control	295
Disease detection	295
Vegetation measurement	296
Monitoring plant growing	296
Fruit/food grading.....	297
Crop yield	297
Flower and seed detection.....	298
Plant classification.....	298
Summary	300
References.....	300
Index	307
